

**HKC**

The smart choice  
for **your** home

## Why Choose HKC?

## Introduction

For over 30 years, HKC has designed and manufactured security systems for homes and businesses across the UK and Ireland. Our fully flexible wired and wireless intruder alarm panels, devices, detectors and communicators are renowned by industry professionals for their reliability, innovative technology and secure cloud-based connectivity.

Backed up by our outstanding technical support, our versatile, adaptable range of products puts the installer and end-user fully in control. Through cloud connectivity, our unique installer desktop software and mobile apps allow full operation of the system whether you're in the property or on the move.

And with a wide and diverse range of detection devices and expandable control panels, our systems are designed around your unique requirements, keeping you and your property safe and secure.

## Safe and Secure and tailored to you

**Protection falls into two categories:**

**Perimeter Protection** is where a building is protected with devices located on external doors and windows through contact or shock sensors which detect attempted or forced entry.

**Trap Protection** comprising of devices internal to the building such as motion detectors to detect the presence of intruders - usually more suitable to a building which is unoccupied while the system is armed.

HKC offer the ideal solution - a combination of both - protecting the perimeter and interior of your property, ensuring early detection and warning of any attempted intrusion.

## Protecting your home, inside and out

Our residential security systems are more than a simple alarm, they can be connected to an adaptable range of wired and wireless sensors that will protect your property from unwanted intruders and give you and your family wider protection against other threats to health such as fire, smoke and carbon monoxide.

Our alarm systems can be controlled via our user-friendly touch sensitive control panel keypads, key fobs or the HKC SecureComm mobile app connection to a secure cloud.

External windows, doors and gates can be protected with inertia shock and/or magnetic contact sensors and can be used in conjunction with motion detectors and wireless PIR cameras - protecting your entire property.

A vital component of any alarm system, our Life Safety range can detect dangers such as smoke, heat and carbon monoxide and we offer the added protection of panic buttons to allow you to activate the system in an emergency.

## Connected, flexible and Secure

All of our systems and devices are connected to a secure cloud infrastructure we've developed called SecureComm which you can access through the **HKC App** on any smartphone.

The **HKC SecureComm2 App** allows complete control of the system wherever you are, connecting seamlessly to your alarm system and your smart home devices - so you can arm or disarm the system, monitor cameras, turn lights and heating on, open gates or simply check the log to see the event history. You can also choose to be notified of any activity on your system via push notifications to the App.

Once connected to the **SecureComm Cloud** the installer can manage the system via the HKC Engineer App, allowing them to carry out remote maintenance and change device settings without the need to visit the premises - saving you time and effort.

The SecureComm cloud also enables connection to 3rd party ARCs (Alarm Receiving Centres) offering monitoring services for 24/7 peace of mind.

# HKC

## Versatile, User-friendly and Reliable

### Sirens and sounders

External Bell boxes can act as a visible deterrent, and we offer wired and wireless bells with an eye-catching flashing comfort LED strobe and audible siren for added protection.

### Control Panels

Wired, Hybrid or Complete wireless panels which are easy to install and operate. Our Quantum 70 panel is ideal for Residential Properties and Small businesses, allowing up to 70 wireless devices. For larger properties our SW10270 panel can support 200 wireless devices and up to 270 zones.

### Intruder Detection Devices

Wired & Wireless contacts and shock sensors for doors and windows monitoring entry and exit points  
PIR sensors, cameras and dual technology sensors with a PIR to detect heat and microwave detector to detect motion

### Life Safety Range

- Smoke detectors
- Heat detectors
- Carbon monoxide (CO) detectors
- Wired & Wireless Panic Buttons
- Key Fob with Personal Alarm

## Your security checklist

Here's a list of things to consider when choosing a system to secure your home.

- 1 Type of system:** Determine what type of security system you need. Do you want a wired or wireless system? Do you want a monitored or unmonitored system?
- 2 Features:** Consider the features you need. Do you want motion sensors, door and window sensors or cameras? Do you want a system that can be controlled remotely?
- 3 Additional Protection:** Think about whether you want a system to give your household additional protection, such as fire, smoke or Carbon Monoxide detectors. Have you considered installing panic buttons?
- 4 Compatibility:** Do you need the system to be compatible with other devices you may have, such as lights, cameras or gate controllers?
- 5 Range:** Does the wireless range of the system ensure reliable connection between devices across the whole of your property?
- 6 Ease of use:** Is the system easy to use and operate for you and your family?
- 7 Maintenance:** Determine what maintenance is required for the system - can your installer control, configure or maintain the system remotely?

## More ways to stay safe.

### The Top Five Tips

- 1 Secure all doors and windows\*.** Did you know that 59% of burglars enter through the front door (\*Nimblefins Crime Study).
- 2 Light up your home:** Use your HKC app to control your lighting when you are away from home.
- 3 Use your alarm even when you are at home:** Have your HKC alarm set to 'Home' even when you are in the house.
- 4 Don't make it easy for burglars:** Make sure you store your keys safely and well away from your windows and letterboxes.
- 5 Record your valuables:** It is a very good idea to record any valuables in your home and never keep large amounts of cash in your house.

Did you know that main entry points by burglars are:

**76%** of all burglaries occur through doors (59% front, 33% back) compared with just **20%** through windows

And of course HKC's cloud connected app could help you control compatible smart devices even when you're not home.
